

I am a ardent user of satellite radio and find the instant traffic and weather (Boston area) an improvement over what I learn from several FM and AM stations. I would be greatly distressed to learn that this service would be limited in the future.

I respectfully urge you to reject a petition 04-160 which I understand will limit or stop this type of service on satellite broadcasting.

I pay for the satellite radio because it is an improvement over what I receive locally. Isn't that what competition is all about??
